PLANT SUPPLY

Our supply of strawberry plants for 1953 is below normal. We have similar reports from plant growers in other areas. Order early. Delay may mean disappointment.

SHIPPING SEASON

We ship as soon as weather conditions permit digging the plants. Normally this is April 1 to 15. We ship until June 1 but all orders received for shipment after May 10 are sent at the purchaser's risk. We do not ship plants in the late summer or Fall. Also please note that we are not open for business on Sunday.

OUR GUARANTEE

We guarantee that our plants are true to name, correctly counted in bundles of 25 plants each, properly packed and shipped to reach you in the best condition. Should you have any complaint regarding the plants, the packing or the service, it must be made at once upon receipt of the plants. We always stand back of our plants and service and are ready to make right anything for which we are responsible. However, in no case will we be responsible for more than the purchase price of the plants. Nor can we be responsible for any condition affecting the growth of the plants which occurs after their arrival and which is beyond our control.

Our aim is always to fill your order when you want it. However, since we ship only fresh dug plants, we are sometimes delayed by adverse weather which makes it impossible to get your order out on the day you request.

No. 1216 State of New York

Department of Agriculture and Markets

C. Chester DuMond, Commissioner

Certificate of Inspection of Nursery Stock

THIS IS TO CERTIFY that the Strawberry Plants of W. E. Benning of Clyde, County of Wayne, State of New York, have been duly examined in compliance with the Agriculture and Markets Law and have been found to be apparently free from all injurious insects, and plant diseases. This certificate is valid until October 1, 1953, unless revoked before that date.

Dated Albany, N. Y., Oct. 8, 1952.

C. CHESTER DUMOND, Commissioner.

H. B. LITTLE, Director, Bureau Plant Industry.

STANDARD VARIETIES

PREMIER (Howard 17)

Early. Bright red. Medium to large. Moderately firm. Quality good. Early berries wedge shaped. Later berries conic. Heavy yielder. Frost resistant. Widely adapted to all Northern berry areas. A time proven sure cropper.

Plants vigorous, healthy, prolific.

Growers have been making money with Premier for thirty years.

TEMPLE

As early as Premier and of excellent quality. Heavy cropper. Long picking season. Berries large, glossy, beautiful attractive red. Firm. Wedge to conic in shape.

Plants grow luxuriantly. Upright. Dark green. Healthy. Red stele resistant. Good plant maker. Temple is one of the newer varieties that has caught on and is rapidly becoming a leading commercial berry.

FAIRFAX

No finer quality berry grown. Large. Very sweet. Unsurpassed flavor. Firm and solid. Stands up well for a long period. As they stand berries turn from a bright red to a dark purple color. Once customers taste Fairfax's quality and flavor they call for those "dark berries." Yields good. Ripens early midseason.

Plants large and upstanding and produced in moderate numbers. More easily damaged by late spring frosts than some varieties.

CATSKILL

A top ranking midseason commercial berry. Large to very large, irregular shaped, long necked berries. Firm. Bright attractive color. Heavy yielder. Will take considerable wet weather at harvest time without rotting. A proven money maker.

Moderate plant maker. Foliage dark green and healthy.

FAIRLAND

Heavy yielder. Berries bright red and attractive. Lighter in color and larger in size than Sparkle. Quality good. Moderately firm.

Plants large, vigorous and running freely. Red stele resistant. Leaves luxuriant and beautiful.

Worthy of trial as a commercial berry in Northern areas.

ROBINSON (Scarlet Beauty, Kardinal King)

Late. Produces enormous quantities of large to very large berries. Early berries distinctively rigid. Later berries smooth and cone shaped. Light red. Quality fair. Only moderately firm. Berries hold their size well thru the season. Subject to rot in humid weather.

Plants small and weak looking with only a few

short roots yet possessing an amazing vitality. Do not be deceived by the appearance of your Robinson plants when they arrive. Set them out and you will find that they will grow and produce an astounding quantity of both plants and berries.

While Robinson lacks somewhat in quality and firmness, it will produce a large quantity of big attractive berries which sell well.

SPARKLE

Our biggest seller. A top quality heavy yielding late berry. Continues to produce after other varieties are gone. A superb freezing berry. It is well named for the medium to large, beautiful, bright, red, glossy berries truly "sparkle." Long picking season. Firm.

Plants as attractive as the berries. Vigorous, dark green, shining foliage. Abundant plant maker.

If you are not growing Sparkle, try them.

EVERBEARERS

Everbearers will extend the strawberry season thru late summer and Fall until cold weather. Plants set this Spring will bear a crop this Fall. The blossoms should be picked off until early July in order to give the plants a chance to get a good start.

GEM

An old time proven Everbearer and still one of the best. Berries light red, medium to large in size. Quality good. Moderately firm.

Plants small but vigorous. A good plant maker.

SUPERFECTION

One of the best of the newer Everbearers. Similar to Gem. Quality good. Berries bright red, round and smooth. Medium to large in size. Yields well.

Plants healthy and vigorous making a good row.

RED RICH—Plant patent 993.

New. Deep red extending thru the entire berry. Cross of Fairfax and Wyzata. The finest quality Everbearer. Delicious flavor. Sweet.

Produces the largest, most rugged plants of any Everbearer. Foliage beautiful. Limited plant producer. Requires

rich soil for maximum production. Does best when grown in hill system.

For the most delicious Everbearers you have ever eaten try Red Rich. Plants will be shipped direct from the originator.
